
Model 1.1.0 (SFINCS, Hurricane Sandy 28-31 Oct 2012). USGS high-water marks of quality excellent/good inside the model domain. Model value = median water level of flooded ground within 50 m of each mark (3.125 m flood map). Five marks behind coastal lakes whose outlets the model's ground holds shut (Deal Lake, Wreck Pond) give the largest misses; without them RMSE 0.24 m (n = 114).
