Where the model floods vs. where FEMA mapped Sandy's surge

Hurricane Sandy, 28-31 Oct 2012. Model 1.1.0 (rain ON) vs FEMA MOTF surge extent; scored on land, 15 m cells

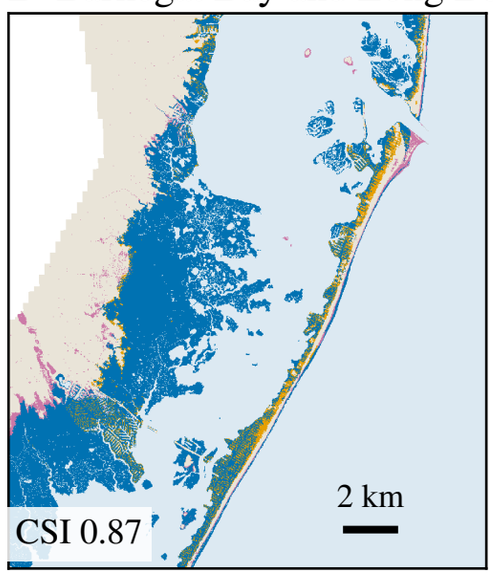

New Jersey coast (120 m cells)

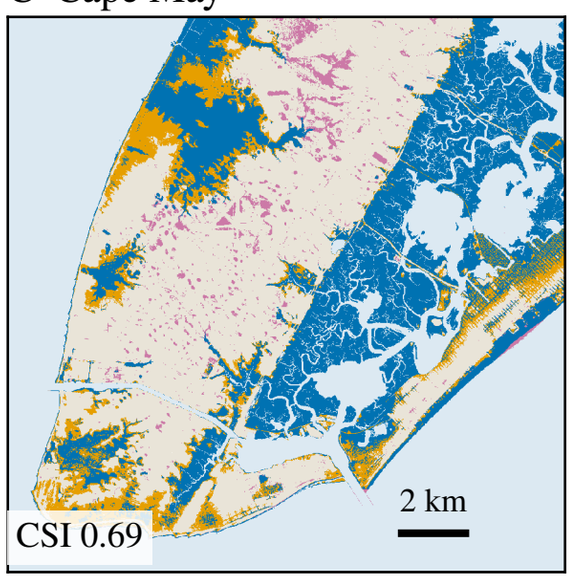

A Hoboken, Jersey City, Newark Bay

B Barnegat Bay and Long Beach Island

C Cape May

CSI 0.80

overlap of the two flooded areas
(1 = perfect match)

POD 0.87

share of FEMA's flooded land
the model also floods

FAR 0.09

share of the model's flooded land
FEMA saw dry (0 = none)

Run: v4_refreeze_swz_v11 / p4-premier+weir-elizabeth-rahway. FEMA Modeling Task Force (MOTF) Sandy surge extent, NJ only; model 'flooded' = peak depth >= 0.15 m (the scorer's rule). Scored only on land the model simulated (its own active cells) inside NJ; open water, DE / PA / NY land and ground outside the model are not scored.
