Hurricane Sandy would flood today's power sites

Model 1.1.0 hindcast of Sandy (2012 storm, 2012 ground and sea level) against today's plants and substations.
Larger marks = power plants. Flooding means water on site, not failure: floor heights and site walls are unknown.

A New Jersey coast

B Newark Bay and the Meadowlands

60 flood

122 stay dry

71 not computed

of 253 New Jersey power plants and substations inside the model

Floods (≥ 0.15 m on site)
Stays dry
Not computed (edge of model)
